

## **School/Community IPM Field Trip 8<sup>th</sup> International IPM Symposium – Salt Lake City, UT**

*Monday, March 23, 2015      1:00pm - 5:00pm*

Welcome! Your host for this field trip is Seth Dibblee ([dibblee.seth@epa.gov](mailto:dibblee.seth@epa.gov)) of the U.S. Environmental Protection Agency, Region 5.

Your first stop will be at Hillside Middle School, of the Salt Lake City public schools (<http://www.slcschools.org/schools/middle-schools/Hillside-Middle-School.php>) and a diverse community of about 520 students in grades 6-8. Director of Facility Services Gregg Smith ([Gregg.Smith@slcschools.org](mailto:Gregg.Smith@slcschools.org)) will welcome you and showcase the nationally-recognized IPM program in the Salt Lake City School District. Utah State University Extension Diagnostician Ryan Davis ([ryan.davis@usu.edu](mailto:ryan.davis@usu.edu)) will discuss the features of the IPM program, along with the new state regulations requiring IPM in schools. He will be joined by School IPM expert Marc Lame ([mlame@indiana.edu](mailto:mlame@indiana.edu)) of the Indiana School of Public and Environmental Affairs.

Your next stop will be just around the corner at Frog Bench Farms (<http://www.frogbenchfarms.com>) an urban commercial organic farm that specializes in organic vegetables for restaurants, farmers' markets and individuals. Co-owner Paula Sargetakis will conduct a tour of the farm, which will be busy with spring activities, and discuss pest and disease pressures and their management tactics. NOTE: Frog Bench Farms' best management practices prohibit more than 10 visitors in the greenhouse in one 24-hour period. As a result, a tour of the greenhouse will be limited to a subset of participants today, or perhaps off-limits entirely.

Your third and final stop will be at one of the Wasatch Community Gardens, in a neighborhood nearby. Wasatch Community Gardens is a grass-roots non-profit organization that "**empowers people of all ages and incomes to grow and eat healthy, organic, local food.**" See <http://www.wasatchgardens.org>) Susan Findlayson ([Susan@wasatchcommunity.org](mailto:Susan@wasatchcommunity.org)) and her staff will discuss the successes and challenges of urban agriculture, including strategies to manage pests.

### Acknowledgements

In addition to your presenters today, special thanks go to the entire Utah Pests Team for their assistance in planning and coordinating this trip, including Diane Alston, Marion Murray, and Katie Wagner.
